

Plates alone give a lot of info...

a speed cam is still a camera

- › to mail u a ticket, it must **photograph your car, read your plate**, & log the **time + place**.
- › that's a little record of **who was where, when**. the "ShotSpotter" noise units also **listen**.
- › the city says it **owns the data** & won't share it with outside agencies, incl. immigration.
- › **but without a clear and transparent regulation** at place, does a promise hold for **5+ years**, across new staff, chiefs, mayors & new admin pressure?

› where your car goes says a lot about you:

› the clinic, the religious establishment, the union hall, the protest, the lawyer, recovery meetings, home....

› pooled over time, plate logs can sketch your whole routine + who u visit.

› "nothing to hide" assumes the data is only ever used as promised, by people u trust, forever. that's a big assumption... but we know this entire profit model is built off reselling people's personal data. Plus, data breaches happen all the time!

But what else might happen?

what the city just bought

- › **april 2026**: city council okayed a 5-year deal worth up to \$4M with jenoptik for **mobile speed + noise cameras**.
- › **6 devices** to start — 3 north, 3 south. named streets: jaguar dr, zia rd, camino carlos rey, siringo rd, galisteo.
- › they **move around** to "hot spots."
- › (**separately, feb 2026**: a \$345k, 1-yr ShotSpotter gunshot-listening pilot* in 2 neighborhoods.)

*Basically AI-powered microphones that are **always listening**

Let's look at Flok...

- › flock is the largest police plate-cam vendor — **billions of scans a month**.
- › 2025–26 audits found **federal + out-of-state agencies** reaching local plate data — sometimes via "back doors," sometimes local cops searching on behalf of immigration agents.
- › a california lawsuit alleges plate data was shared with federal agencies roughly 1.6 million times.
- › a u.s. senate probe found promised "filters" against ICE + abortion searches were easily bypassed.

Does this tech keep us safe?

Santa Fe, 2026 — made by concerned neighbors

Michael Garcia's WATCHING you!

Under Big Brother Michael Garcia, the city / SFPD has spent **millions of tax dollars** on new, **privately-contracted cameras and microphones** that are **watching you**.

This a quick guide to what they capture, privacy implications, & what u can do!

- › musician + investigator benn jordan & others accessed flock cameras in under 30 seconds while not authorized to do so. So they're vulnerable to third parties.
- › late 2025: dozens of flock cameras were found **live-streaming to the open internet** — no password — viewable (and analyzable) by anyone.
- › researchers found footage was kept past the company's promised window, unencrypted, including identifiable pictures of people, not just plates.
- › a system is only as safe as its sloppiest setting.

What can we all do about this, together?

OK TO COPY & SHARE

- › **KEEP THE PRESSURE UP**: ask how long is data kept? who can search it? is there a public audit log? can sharing be prevented by contract or by design?
- › **SHOW UP**: council meetings + public comment are where these contracts get shaped.
- › **FILE an IPRA** (public records) request to see your own plate data + the policies
- › **TALK to neighbors**. Public pressure has successfully made other cities pause, lock down, or cancel.

› a system is only as safe as its sloppiest setting.
